

CEILING SYSTEMS

[Between us, ideas become reality.]

Effects Wood
surface with comfort factor

Effects Wood - surface with comfort factor

Effects Wood is a unique new metal ceiling from Armstrong and offers architects and building owners the opportunity to combine the attractiveness and exclusivity of a natural wood surface with all the advantages of a metal ceiling.

Thanks to an innovative technology it is possible to confer a natural wood appearance on metal panels and wall claddings. The ceiling is not laminated so the danger of exfoliation is nullified. Further, the coating generates a uniform colour tone and a consistent texture. As a result the obvious variations which so often accompany real wood panels are minimized.

Advantages

- In contrast to natural wood panels, Effects Wood panels do not need any time to acclimatize to the ambient temperature and humidity conditions of the local environment
- good acoustic values depending on the perforation
- lower dead weight, greater durability and easier installation than natural wood panels
- outstanding wood imitation thanks to the new technology
- no danger of exfoliation
- additional advantages of a metal ceiling can be utilized

Application scope

- offices
- corridors and lobbies
- conference rooms
- transport facilities
- health facilities
- retail and leisure
- education facilities

Effects Wood can be combined with all Armstrong metal ceiling systems. Information on these systems can be found in the main brochure on Armstrong metal ceilings. The most suitable solution depends on the specific application itself.

Acoustics

Metal ceilings and wall claddings with Effects Wood can be made sound absorbent by combining them with appropriate inlay material.

Of course, we can offer you specific designs on request. Your Armstrong consultant will be happy to advise you.

maple (steam-treated)

douglas-fir

walnut

pine

elm

oak

These types of wood are available, further ones on request.
